MEWP PRE-USE INSPECTION CHECKLIST
A pre-start inspection should be carried out every day and all staff should be briefed on what they entail. These checks will confirm that the machinery is safe to operate and identify any potential hazards it may pose before the work at height is carried out. The IPAF 41 Point MEWP Pre-Start Inspection

Don’t overlook the daily MEWP Pre-Start Inspection - promax
Pre-use inspections are often overlooked the more confident you become as an operator but they’re vital to ensure that your MEWP is secure, complete, clean, and working properly. In fact, you should always inspect the entire machine before and after use. That way, you’ll always put MEWP safety first.

IPAF Training: Pre-Use Inspection Checklist to put MEWP ...
To ensure the MEWP is working correctly, an operator should carry out a daily pre-use inspection and record it. The inspection should include a full function test of both the lower and upper controls and any emergency lowering devices. Any faults found should be reported immediately. This may mean isolating and tagging the MEWP to warn others.

International Health and Safety at Work has been specially written in simple English for the thousands of students who complete the NEBOSH International General Certificate in Health and Safety each year. Fully revised in alignment with the April 2015 syllabus, this third edition provides students with all they need to tackle the course with confidence. Clear, easily accessible information is presented in full colour, with discussion of essential principles such as ILO and OSH conventions as well as legal frameworks from a range of countries. Aligned to the NEBOSH International General Certificate in Occupational Health and Safety Practice questions and answers to test knowledge and increase understanding Complete with a companion website containing extra resources for tutors and students at www.routledge.com/cw/hughes The only textbook endorsed for the NEBOSH International General Certificate in Health and Safety, International Health and Safety at Work remains the most effective tool for those working to fit international health and safety standards to local needs and practice.

Describes the safe working practices to be followed when using a mobile elevating platform (MEWP) for tree work. This leaflet helps you identify the controls to put in place when using a MEWP for tree work.

The construction industry has not had a good record on health and safety and faces tough legal and financial penalties for breaches of the law. This book provides a unique resource for all those who construct or procure the construction of projects of all sizes and in all countries and for clients who need to keep abreast of their own and their contractors' responsibilities. It gives practical guidance on best practice, including: measuring performance and recording information developing a safety policy and method statements assessing risk training and understanding people the basics of the construction/environment interface The book addresses several topics not found in other reference works, discussing techniques of health and safety and basic environmental management as applied to the industry. It uniquely provides 50 quick reference guides setting out solutions to common problems. These include falls, manual and mechanical handling, work with asbestos and noise. It also summarises the main UK legal requirements on construction safety and health and includes a number of useful checklists and model forms. Written by a very experienced health and safety practitioner, who is also author of the highly successful IOSH book Principles of Health and Safety at Work, this book will be welcomed by all responsible for health and safety. It will also provide an excellent text for the NEBOSH (National Examination Board in Occupational Safety and Health) Construction Safety and Health national certificate.

John Ridley and Dick Pearce, both recognized specialists in machinery safety, guide the reader through the various standards, regulations and best practices relating to the safe design and use of machinery and show which standard is relevant for which type of machine. Safety with Machinery provides a basic grounding in machinery safety and covers safeguarding philosophy and strategy, typical hazards, risk assessment and reduction, guarding techniques, ergonomic considerations, safe use of equipment and plant layout. All types of safeguards are discussed – mechanical, interlocking, electrical / electronic / programmable, hydraulic, pneumatic. The new edition has been updated throughout in line with changes in regulations and standards. The section on electric, electronic and programmable safety systems has been expanded to reflect their increasing importance. The book now focuses on the harmonised standards (e.g. EN ISO 13849, IEC/EN 61131-2) which can be used by manufacturers to self-certify their machines for the European market without the need for third party examination, but also covers other relevant standards (e.g. IEC 62061). Many practical examples set the regulations in context and assist in the interpretation of the various standards. Safety with Machinery is essential reading for all engineers involved in machinery design and maintenance all over the world as every machine sold within or into the EU needs to conform to the harmonised standards. It also provides health and safety professionals, students and employee representatives, as well as certification bodies, health and safety inspectors and safety regulators with a comprehensive overview of machinery safety.

Port work is still considered an occupation with very high accident rates. This essential code of practice, intended to replace both the second edition of the ILO Code of Practice on Safety and Health in Dock Work (1977) and the ILO Guide to Safety and Health in Dock Work (1976), provides valuable advice and assistance to all those charged with the management, operation, maintenance and development of ports and their safety. Offering many detailed technical illustrations and examples of good practice, the provisions of this code cover all aspects of port work where goods or passengers are loaded or unloaded to or from ships. It is not limited to international trade but applies equally to domestic operations, including those on inland waterways. New topics are: traffic and vehicular movements of all types; activities on shore and on ship; amended levels of lighting provision; personal protective equipment; ergonomics; provisions for disabled persons; and the specific handling of certain cargoes, for example logs, scrap metal and dangerous goods.
