Andrew Gordon goes to the core of the Japanese enterprise system, the workplace, and reveals a complex history of contest and confrontation. The Japanese model produced a dynamic economy which owed as much to coercion as to happy consensus. Managerial hegemony was achieved only after a bitter struggle that undermined the democratic potential of postwar society. The book draws on examples across Japanese industry, but focuses in depth on iron and steel. This industry was at the center of the country's economic recovery and high-speed growth, a primary site of corporate managerial strategy and important labor union initiatives. Beginning with the Occupation reforms and their influence on the workplace, Gordon traces worker activism and protest in the 1950s and '60s, and how they gave way to management victory in the 1960s and '70s. He shows how working people had to compromise institutions of self-determination in pursuit of economic affluence. He illuminates the Japanese system with frequent references to other capitalist nations whose workplaces assumed very different shape, and looks to Japan's future, rebutting hasty predictions that Japanese industrial relations are about to be dramatically transformed in the American free-market image. Gordon argues that it is more likely that Japan will only modestly adjust the status quo that emerged through the turbulent postwar decades he chronicles here.

An overall view of the vast spectrum of knowledge needed by practicing rocket scientists and engineers, Introduction to Rocket Science and Engineering presents the history and basics of rocket theory, design, experimentation, testing, and applications. It covers an array of fields, from advanced mathematics, chemistry, and physics to logistics, systems engineering, and politics. The text begins with a discussion on the discovery and development of rockets as well as the basic principles governing rockets and rocket science. It explains why rockets are needed from economic, philosophical, and strategic standpoints and looks at why the physics of the universe forces us to use rockets to complete certain activities. Exploring how rockets work, the author covers the concepts of thrust, momentum, impulse, and the rocket equation, along with the rocket engine, its components, and the physics involved in the generation of the propulsive force. He also presents several different types of rocket engines and discusses the testing of rocket components, subsystems, systems, and complete products. The final chapter stresses the importance of rocket scientists and engineers to think of the unusual, unlikely, and unthinkable when dealing with the complexities of rocketry. Taking students through the process of becoming a rocket scientist or engineer, this text supplies a hands-on understanding of the many facets of rocketry. It provides the ideal foundation for students to continue on their journey in rocket science and engineering.

In fictional style (but based on testimonies and research), recounts the Holocaust experiences of the family of the hasidic Rabbi Yosef Paneth of Illeanda (from the Paneth family of Dej, Transylvania) and their numerous relatives who lived in various parts of Romania, Hungary, and Poland. The first part of the narrative evolves around the efforts to rescue Brendele, the rabbi's daughter, who was in Kraków, visiting her grandmother, when the Nazis invaded Poland. Eventually Brendele rejoined her family in the spring of 1943, after she was smuggled from Poland through Slovakia into Hungary. Her testimony regarding the horrors she witnessed influenced her family's reactions to the Nazi invasion of Hungary in 1944. The rest of the narrative describes the family's experiences after the invasion, their deportation to the Dej ghetto, and their escape from the ghetto to Romanian territory with the help of local non-Jews. Includes abundant information regarding the fate of many hasidic rabbis and communities who were related to the Paneth family of Dej.

Doing Film Studies examines what it really means to study film, encouraging the reader to question the dominant theories as well as understanding the key approaches to cinema. This book provides an overview of the construction of film studies - including its history and evolution - and examines the application of theories to film texts. Important questions discussed include: Why does film studies need a canon? What is the relationship between authorship and genre theory? What is screen theory? How do we read a film text? Why is the concept of the spectator important to film? How is film involved in national identity? What is meant by a ‘film industry’? Aimed at students in their final year of secondary education or beginning their degrees, Doing Film Studies equips the reader with the tools needed in approaching the study of film.
