A Mathematical Introduction to Logic (More formally, we can prove by induction on  $n$  that there is a tautologically equivalent  $\phi$  in which only the connectives  $\neg, \wedge$  occur. Two cases in the inductive step are Case  $\neg$ : If  $\phi$  is  $(\neg \psi)$ , then let  $\psi$  be  $(\neg \psi')$ . Case  $\wedge$ : If  $\phi$  is  $(\psi \wedge \chi)$ , then let  $\psi$  be  $\neg(\neg \psi \wedge \neg \chi)$ .

Logic thus became a branch of mathematics. Boolean algebra is the starting point of mathematical logic and has important applications in computer science. Charles Sanders Peirce built upon the work of Boole to develop a logical system for relations and quantifiers, which he published in several papers from 1870 to 1885.

In mathematical logic, propositional logic and predicate logic, a well-formed formula, abbreviated WFF or wff, often simply formula, is a finite sequence of symbols from a given alphabet that is part of a formal language. A formal language can be identified with the set of formulas in the language. A formula is a syntactic object that can be given a semantic meaning by means of an interpretation.
