Finding each point took some back and forth movement of the harmonic balancer nut. Then I measured between the marks. That measurement, 3.98 inches, told me the engine was a 300, and not a 240. Ford stroked a 240 to make the 300, just like they did with the 360, to make a 390. On the outside the engines are identical.

It seems that babying an engine too much might actually be bad for it from my experience. Now all my experience with this has also been with engines that seem to have been neglected for some time before I see them so that is another variable to throw in. Most recent is the 1.0L in the 1992 Geo Metro I picked up. The oil was sludgy so the first thing I did was change the oil with a high quality ...
