office quality controllers are as enamoured of this term as much as manufacturers abhor it. What is it that makes it so distasteful? Why does it occur? How can it be controlled? While there are numerous leaflets, documents and articles available on pucker, we have found that the

majority of them lay great stress on “inherent pucker” (only material parameters). In this booklet have tried to include process parameters as well as sewing of lightweight fabrics. All said and done, the problem is so intricately interdependent that exhaustive compilation is well nigh
