In November 1976 Boxford began to market 5" x 22" Model ME10, a less expensive lathe - though constructed from components identical to machines higher up in the range. Early ME10s had a normal, full-length countershaft and were little different to the run-of-the-mill rear-drive models - the aim, presumably, being to use up supplies of no-longer-needed parts as the successful under-drive models ...

### Boxford Lathes

Sheraton "9-Inch" lathe. The very best Manual is the one produced in England for the South Bend clone made by Boxford. Unlike the South Bend book "How to Run a Lathe" this 170-page edition concentrates in detail on the 9-inch lathe. I have also added all the known relevant South Bend 9-inch data to give a complete data pack for the machine: operating instructions - extra comprehensive ...

Depending on what model Boxford you have but most are derived from the US South Bend 9" lathe. As is the Aussie made Hercus lathe. Should be plenty of info online for those two variants. I would go for 1hp although a 3/4 would do the job. But definitely worth looking into a VFD or inverter set up if you are starting from scratch. The 3ph motors run so much smoother. Niels Abildgaard: 05/06 ...
