Overview. Chemotherapy for breast cancer uses drugs to target and destroy breast cancer cells. These drugs are usually given directly into a vein through a needle or as a pill. Chemotherapy for breast cancer frequently is used in addition to other treatments, such as surgery, radiation or hormone therapy.

Chemotherapy for breast cancer - Mayo Clinic

Certain types of chemotherapy and radiation therapy can weaken the immune system, putting cancer patients at increased risk for life-threatening infections. Because of this, many cancer patients may need to get revaccinated against diseases they received vaccines for as children. And some may require additional vaccines or boosters to help protect such against infections.
