Values for BTEX  
were markedly  
higher among  
smokers than  
nonsmokers.  
Because the

# Access Free Determination

sources of BTEX

exposure are commonly derived (i.e., vehicle

exhausts and smoking), their values in subjects' urine

were significantly intercorrelated.

Levels of toluene and o-xylene were

# Access Free Determination

correlated  
significantly  
with the number  
of cigarettes  
smoked per day.
