Rev. ed. of: Economics of health and medical care / Philip Jacobs, John Rapoport. 5th ed. Aspen Publishers. c2002.

In order to control ever-increasing health care expenditure, Western and Asian countries are seeking to develop more efficient health care models. Studies on health care that focus specifically on Asian countries are rare, rendering this a unique and welcome addition to the literature. This book presents quantitative

research on various aspects of health care reform and health policy in Asia-Pacific countries such as China, Indonesia, Japan, South Korea, Taiwan, and the US - nations diverse in their economic development, social demographic structure and health care expenditures.

"This resource book discusses the economic arguments that could (and could not) be put forth to support the case for investing in the social determinants of health on average and in the reduction in socially determined health inequalities. It provides an overview and introduction into how economists would approach the assessment of the economic motivation to invest in the social determinants of health and socially determined health inequities, including what the major challenges are in this assessment. It illustrates the extent to which an economic argument can be made in favour of investment in 3 major social determinants of health areas: education, social protection, and urban development and infrastructure. It describes whether education policy, social protection, and urban development, housing and transport policy can act as health policy"--

This popular textbook provides a comprehensive but accessible coverage of health economic principles and applications. It provides an introduction for those with no previous knowledge of economics, but also more advanced material suitable for those with a background in economics. Now into its second edition, Barbara McPake and Charles Normand have incorporated developments in economic evaluation and economics of health systems from recent research and experience while retaining an accessible approach and style. The book starts with a section on basic economic principles as applied to health and health care, and goes on to discuss economic evaluation in health care, the economics of health systems and health care finance. Examples and illustrations are taken from a wide range of settings and world regions, reflecting the authors' belief that the same principles apply, and that it is useful to have some understanding of how different countries organise the health system. It provides an understanding of the performance of different health systems from the insurance based approaches in the United States to government funding that is common in Canada and most countries in Europe, and the mixed systems that operate in most low-income countries. This book is ideal for students in public health and related courses, for health care professionals and those studying health economics at a more advanced level.

What new theories, evidence, and policies have shaped health economics in the 21st century? Editors Mark Pauly, Thomas McGuire, and Pedro Pita Barros assemble the expertise of leading authorities in this survey of substantive issues. In 16 chapters they cover recent developments in health economics, from medical spending growth to the demand for health care, the markets for pharmaceutical products, the medical workforce, and equity in health and health care. Its global perspective, including an emphasis on low and middle-income countries, will result in the same high citations that made Volume 1 (2000) a foundational text. Presents coherent summaries of major subjects and methodologies, marking important advances and revisions. Serves as a frequently used non-journal reference. Introduces non-economists to the best research in health economics.
