Plant resources are especially important since they protect the environment, provide habitats for both flora and fauna, and directly or indirectly provide the resources for man's survival. An understanding of how plants are adapted to survive is an essential tool for the better management of the environment. ... Ecophysiology of Economic Plants ...

*Ecophysiology of Economic Plants in Arid and Semi-Arid ...*

A basic tenet of ecophysiology, made explicit in DGVMs, is that plants lose water during transpiration when stomata open to take up CO<sub>2</sub> from the atmosphere during photosynthesis. Thus, there is a close coupling between carbon gain and water loss, both being regulated by stomatal 'openness.'
