Contains extensive criteria grounded in past and current successful projects and activities by experienced Expense and cost recovery system (ECRS) practitioners. Their mastery, combined with the easy elegance of the self-assessment, provides its superior value to you in knowing how to ensure the outcome of any efforts in Expense and cost recovery system (ECRS) are maximized with professional results. Your purchase includes access details to the Expense and cost recovery system (ECRS) self-assessment dashboard download which gives you your dynamically prioritized projects-ready tool and shows you exactly what to do next. Your exclusive instant access details can be found in your book.

Both librarians and professors can be overwhelmed by the bewildering number of scholarly metrics. This user-friendly book demystifies them, helping librarians become familiar with scholarly metrics and giving them the confidence to assist faculty at their institutions. It also equips faculty authors with the knowledge to evaluate journals and use metrics to track their scholarly impact. Several controversies exist in the scholarly metrics landscape, including a disagreement between the proponents of altmetrics and traditional bibliometrics. Even more contentious debates are breaking out over predatory journals and open access publishing. Authors Mark Vinyard and Jaimie Beth Colvin, who successfully launched a faculty publishing initiative, explain which aspects of metrics are truly essential to grasp, and they place these numbers in context. They help readers identify the metrics that are the best fit for their scholarship and give librarians and professors the tools to make smart decisions in this changing scholarly metrics landscape.

This books provides content that arms clinicians with the core knowledge and competencies necessary to be effective informatics leaders in health care organizations. The content is drawn from the areas recognized by the American Council on Graduate Medical Education (ACGME) as necessary to prepare physicians to become Board Certified in Clinical Informatics. Clinical informaticians transform health care by analyzing, designing, selecting, implementing, managing, and evaluating information and communication technologies (ICT) that enhance individual and population health outcomes, improve patient care processes, and strengthen the clinician-patient relationship. As the specialty grows, the content in this book covers areas useful to nurses, pharmacists, and information science graduate students in clinical/health informatics programs. These core competencies for clinical informatics are needed by all those who lead and manage ICT in health organizations, and there are likely to be future professional certifications that require the content in this text.

Not that long ago there were fairly clear divisions between researchers at different stages throughout their career, starting with doctoral students then

progressing to postdoctoral workers and finishing with academic staff. However, more recently the term Early Career Researcher (ECR) has been introduced partly as a response to their growing importance which has been reflected by their increased respect and status shown by national, international and funding bodies. There are several common features of an ECR's job including the need to establish a professional identity and develop into an independent researcher, competing for grants and increasing one's output of research publications; this book offers proven practical advice to help ECRs kick-start a successful academic career. With advice on: Choosing research topics Making best use of a Research Supervisor/Mentor Developing your research writing Getting published: journals and books Writing a research grant/fellowship Becoming a supervisor Becoming a teacher, and Developing your career This guide will help academics at the start of their career no matter what discipline they are engaged in... Arts, Humanities, Sciences or Social Sciences. For example, in sciences and engineering, ECRs are commonly part of a large research team and often have to work in collaborative groups; requiring strong interpersonal skills but can lead to tension in the interaction with one's supervisor or mentor. In contrast, in the arts and humanities and perhaps the social sciences, an ECR is more likely to be an independent scholar with a requirement to work alone, leading to a different type of relationship (but not necessarily any less stressful) with one's supervisor or mentor. Using case studies from across the subject areas to illustrate key points and give suitable examples this vital guide will help all early career academics.
