European pension systems will need to adapt to stay financially sustainable and be able to provide Europeans with an adequate income in retirement. Even though pensioners in most EU countries are less likely to be poor than those who work, inequality among pensioners persists: There are significant country differences in poverty risk and pension income. Older women face a higher risk of poverty or social exclusion than older men do, and women's pensions are more than a third lower on average.

The handbook EU Pension Law discusses the most important financial EU legislation (IORP and PEPP) and non-financial legislation (such as the Charter of Fundamental Rights of the European Union) and its consequences for pensions. The book contains a collection of relevant articles and offers necessary basic knowledge.

Until now there has been no literature drawing together the pensions law of the European Countries in an accessible and clear format. This practical new title adopts a standard format for each chapter, aiding comparison, and examines the main areas of pension law in a country-by-country analysis. The chapters have been written by experts from each country.

EU pension law is a relatively new and rapidly growing field. The call for a broader practical understanding of EU pension law is growing, as pension markets are increasingly internationalized. The handbook EU Pension Law discusses the most important financial EU legislation (IORP and PEPP) and non-financial legislation (such as the Charter of Fundamental Rights of the European Union) and its consequences for pensions. The book contains a collection of relevant articles and offers necessary basic knowledge. More importantly, it contains interesting practical cases, creating a unique bridge between theory and practice. Whether you are a student, a committed policymaker, an experienced market practitioner, or someone interested in European pension developments, EU Pension Law is designed for you.

European pension law is a topic that does not always receive the attention it deserves. For many years, the European Union has made efforts to bring the benefits of the EU single market to the realm of occupational pensions with some remarkable successes. However, some aspects of the EU's pension law and policy remain incomplete for a number of reasons. This book studies European (occupational) pension law from the perspective of a pension scheme member by looking at the prerogatives of the EU in the field of occupational pensions and the history of its involvement with the topic. It then assesses the results of those efforts from a pension scheme member's point of view. It does this not just by examining legislation such as the IORP II Directive or the Supplementary Pension Rights Directive, but also Commission Communications, the legislative processes leading up to adopted legislation and failed attempts at legislation. Finally, it studies the recent PEPP Regulation - a personal pension product that could offer lessons for EU occupational pension law. Bron: Flaptekst, uitgeversinformatie.

This book gives information about the impact, in practical terms, of European Community legislation on pension schemes in the UK. It is a handbook that uses the looseleaf format to provide current information, covering cross-border investment of pension funds to comply with regulation and other issues such as the status of part-timers in pension schemes, Pan European pension schemes and the need for equalization of retirement. A minimum of two yearly updates are included.

Occupational pensions are a key part of the pension system in many EU Member States where they provide workers with social protection in retirement. Their relevance should increase given Europe's old-age pensions crisis. However, occupational pensions are characterised by the complexity and diversity of benefit structures, financing methods and membership rules. This conceptual mosaic has led to different categorisations at national and EU level although solidarity at work and dignity in retirement remain at the heart of European pension systems. The EU's new legal landscape supports the social vocation of the free movement of workers. Social security rights are already protected under Article 48TFEU and Coordination. This thesis argues that EU law must protect migrant workers' occupational pension rights. Member States are clearly facing common demographic, economic, social and political challenges. Moreover, the notion of occupational pension in EU law supports its characterisation as social protection. The justification of a social rationale to the free movement of workers is based on fundamental rights, the EU's social objectives and values as well as the requirement of 'social protection mainstreaming' under EU law. The second part of this thesis claims that EU law has historically failed to deliver adequate protection of migrant workers' occupational pension rights, stemming from a longstanding regulatory gap in which the EU's legislative process has been hamstrung by institutional constraints. Positive integration has remained limited but a recent breakthrough in secondary legislation will bring a new social protection dimension to the free movement of workers, albeit one based on minimum requirements. Negative integration has also been limited, especially in horizontal situations despite recognition of the indirect effect of Article 45TFEU. However, fundamental rights are capable of providing a tool for the interpretation of the free movement of workers to ensure a more holistic respect for their social protection.

This edited volume takes a closer look at various European pension-plan models and the recent challenges, trends and predictions related to the design of such schemes. The contributors analyse new ideas, both from national governments and European institutions, and consider current debates on topics such as the Capital Markets Union (CMU) and the so-called 'European Pillar of Social Rights' - calling for a new approach to social policy at the European level in response to common challenges, such as ageing and the digital revolution. This interdisciplinary work embraces economic, financial and legal perspectives, while focusing on previously selected coherence aspects in order to ensure that the analyses are comprehensive and globally consistent.
