This book is a must for any Florida student preparing for the Biology 1 End-of-Course exam. About the Exam The Florida Biology I End-of-Course exam measures middle and high school student achievement of the Next Generation Sunshine State Standards. All public school students are required to pass the exam in order to receive a high school diploma.

The focus of this research was on the effect of school schedules on student achievement for ninth-grade students in a Florida school district. Data were collected from two central Florida high schools from the 2011-2012 and 2012-2013 school years. Five one-way analyses of covariance (ANCOVA) were performed to ascertain if there was any interaction between school schedules and student achievement. Examined were the interactions (a) between schedule and schools, (b) schedule and male students, (c) schedule and female students, (d) schedule and Black students, and (e) schedule and Hispanic students. The independent variable, school schedule, consisted of two levels: traditional schedule and A/B block schedule. The dependent variable was the spring Algebra 1 End- of-Course Examination (EOC), and the covariate was the Florida Comprehensive Assessment Test (FCAT) Mathematics Eighth-grade Development Scale Score. School schedule was not significantly related to students' spring Algebra 1 EOC scores, $F(1,788) p = .932$. School schedule was not significantly related to male students' spring Algebra 1 EOC scores, $F(1,392) p = .698$. School schedule was not significantly related to female students' spring Algebra 1 EOC scores, $F(1,393) p = .579$. School schedule was not significantly related to Black students' spring Algebra 1 EOC scores, $F(1,186) p = .545$. School schedule was not significantly related to Hispanic students' spring Algebra 1 EOC scores, $F(1,184) p = .700$.

Finally, it was found that there were statistically significant differences in the FSA sub-scores between student groups identified by their performance on the Algebra I EOCA. This study has numerous implications in the areas of data analysis, curriculum design and implementation, mathematics content area reading instruction, and the overall approach to mathematics education for Students with

Disabilities, English Learners, and students with low socioeconomic status.

This study examined the factors that have an effect on student scores on the Florida End-of-Course (EOC) Assessment in four secondary Algebra 1 classrooms using interactive whiteboard tools (IWTs). Four teachers and 335 students were observed in one public suburban school in central Florida during the second half of the spring term. Hierarchical linear modeling was used since the data existed at multiple levels. Student-level data, which included gender, race/ethnicity, and socioeconomic status (SES), were collected via the district and state's data warehouse. Teacher-level data were collected via observations using an observation rubric to determine teachers' levels of interactivity using IWTs, and teacher questionnaires were used to collect teachers' characteristics, which included levels of education, years of teaching experience, and length of time using IWTs. Results indicated that IWTs have a positive effect on student achievement as teachers progress in their levels of interactivity using IWTs.
