In the beginning of the twentieth century, women were demanding more freedom. What could bring more freedom than a chance to fly? Women went up in those early wire-andfabric contraptions to gain independence, to make money, or to make their names as pilots. They sought to prove that women pilots could do just as well as men—and some did far better. Flying High: Pioneer Women in American Aviation tells the story of Blanche Stuart Scott, who made \$5,000 a week and broke forty-one bones; of Harriet Quimby, who flew the English Channel handily and then fell to her death in five feet of water near Boston Harbor; of Ruth Law and Katherine Stinson, who set American distance flying records—all before any of them were allowed to vote. Flying High: Pioneer Women in American Aviation also tells the tales of women behind the scenes—the financiers, engineers, and factory workers—from the earliest days of flying to victory in World War II. These stories of the first female flyers are told in rare, vintage photographs, many previously unpublished, from the archives of the Glenn H. Curtiss Museum.

Om kvinder involveret i flyvning i begyndelsen af 1900-tallet, enten som piloter eller som ansat på virksomheder, som fremstillede fly. Bogen berette bl.a. om Blanche Stuart Scott, som på et tidspunkt tjenet 5.000 USD om ugen og på et tidspunkt kom slemt til skade. Forfatteren fortæller om andre modige kvinder som udsatte liv og lemmer under flyvning, men kom til skade under udfoldelse af andre mere fredelige aktiviteter.

Detailing the role of women in aviation, from the very first days of flight to the present, this rich exploration of the subject profiles 26 women pilots who sought out and met challenges both in the sky and on the ground. Divided into six chronologically arranged sections, this book composes a minihistory of aviation. Learn about pioneers such as Katherine Wright, called by many the "Third Wright Brother," and Baroness Raymonde de La Roche of France, the first woman awarded a license to fly. Read about barnstormers like Bessie Coleman and racers like Louise Thaden, who bested Amelia Earhart to win the 1929 Women's Air Derby. Additional short biography sidebars for other key figures and lists of supplemental resources for delving deeper into the history of the subject are also included.

Bath is the home of America's oldest county fair. The community was planned as western New York's "Queen City," a great metropolis, with broad tree-lined boulevards and spacious squares. Airplanes and ladders were made here, and four railroads-from the "champagne train" to the "kick and push" line-ran through town. Today, Bath remains a town of wide avenues, well-kept greens, dramatic cliffs, busy dairies, and the famous fair that has been held every year for nearly two centuries. Bath serves as the welcoming, wide-open back door to the Finger Lakes.

The oldest names in aviation joined forces in 1929, when Wright Aeronautical and Curtiss Aeroplane formed the giant Curtiss-Wright Corporation. Curtiss airplanes were already " the best things with wings, " while Charles Lawrance had made Wright powerplants the leader in American radial engines. Aviation founding father Glenn Curtiss, along with superstars Charles A. Lindbergh, Jimmy Doolittle, Admiral Byrd, and " Wrong-Way " Corrigan, all blazed skytrails with Wright engines and Curtiss wings. Tiny Sparrowhawk biplane fighters flew from airborne dirigibles. Huge factories poured out war birds in tens of thousands for World War II. Pilots flew them everywhere, from the African desert to Alaskan ice, South Sea islands, and even the Taj Mahal. Relive those days when women, old men, and teenagers kept the factories roaring, and follow Curtiss-Wright clear into the 21st century.

Lenses for railroad lanterns, cut glass for the White House table, Thomas Edison's first light bulb—the glass for all of these was made in Corning, the glass capital of America, the Crystal City. From 1880 to World War I, newfound wealth sparked a spending and building boom that shaped the city. Corning recaptures the city's gilded age, the boom days when tax-free fortunes could be made-and lost-overnight. Vintage photographs show elephants and buffalo parading down Market Street, the Drake family giving recitals on its home pipe organ, churches and public buildings rising, carriages giving way to motorcars, and huge summer homes springing up on the Finger Lakes.

With riveting facts, figures, quotes and statistics from the high-flying world of aviation, From Airbus to Zeppelin has it all.D is for Desert Island Discs: just what would Dambuster Guy Gibson have liked if marooned on his desert island? E is for Everest: did you know that two Scotsmen were the first to fly over the magnificent moutain? F is for Faster than the sun: which aircraft was the first to fly faster than the Earth's rotation?This is a must-read for anyone - and may even win the reader a pub quiz or two!

A New York Times Bestseller " An Amazon Best Book of the Year " A New York Times Book Review Editors ' Choice " A Time Best Book for Summer Between the world wars, no sport was more popular, or more dangerous, than airplane racing. While male pilots were lauded as heroes, the few women who dared to fly were more often ridiculed—until a cadre of women pilots banded together to break through the entrenched prejudice. Fly Girls weaves together the stories of five remarkable women: Florence Klingensmith, a high school dropout from Fargo, North Dakota; Ruth Elder, an Alabama divorcée; Amelia Earhart, the most famous, but not necessarily the most skilled; Ruth Nichols, who chafed at her blue blood family ' s expectations; and Louise Thaden, the young mother of two who got her start selling coal in Wichita. Together, they fought for the chance to fly and race airplanes—and in 1936, one of them would triumph, beating the men in the toughest air race of them all.

An adventure-filled romp through one of aviation ' s most notable, dangerous and entertaining pursuits: airshows! In the early days of aviation, all flights were airshows. Spectators gathered whenever a new flying machine attempted to leave the ground—the trick was to get them to pay. Takeoffs and landings did not sell tickets but people lined up, money in hand, to watch a " dip of death, " in which an aviator would dive from as high as he or she dared and pull up at the last second. Risk always sells and flying was man ' s riskiest endeavor yet. From the start the " exhibition pilots " stood out. Everything about an aerobatic routine requires a degree of skill and a commitment to practice inconceivable to even most pilots, presenting innumerable risks to life and limb. And with risk, often, comes tragedy. The Crowd Pleasers is a sweeping history of air show accidents beginning in 1910 with the death of Charles Rolls, co-founder of Rolls-Royce, and ending in the present day. It brings to light some of the most notable air show accidents of all time and explores the aviators behind them. Their stories, their motivations. In so doing, it illuminates the role played by choice, social circumstance and fate in these often devastating accidents, and the lives attached to them. A must-read for all aviation buffs.
