Distance formula.

The formula for distance, if you know time

(duration) and the

Read Free From Distant Days

average speed, is:

$d = v \times t$. where v

is the velocity

(average speed), t

is the time and d is

distance, so you

can read it as

Distance = Speed x

Time. The result

will depend on the

unit of the speed

metric, for example

if speed is given in

mph, the result will

Read Free From Distant Days

be in miles, if it is given in km/h, the result will be in kilometers.
