An information system (IS) is a system composed of people and computers that processes or interprets information. The term is also

Access Free Fundamentals

sometimes used in more restricted senses to refer to only the software used to run a computerized database or to refer to only a computer system. The plural term information systems (construed as singular) is also used for the actual academic study of the field, in other words for the study of complementary networks

technology (ICT) that an organization uses, but also to the way in which people interact with this technology in support of business processes. Some authors make a clear distinction between information systems, computer systems, and business processes. Information systems typically include an ICT component but are not

system. A work system is a system in which humans and/or machines perform work (processes and activities) using resources to produce specific products and/or services for customers.

An information system is a work system whose activities are devoted to processing (capturing, transmitting, storing, retrieving, manipulating

This book presents a comprehensive and systematic introduction to transforming process-oriented data into information about the underlying business process, which is essential for all kinds of decision-making. To that end, the authors develop step-by-step models and analytical tools for

Access Free Fundamentals

obtaining high-quality data structured in such a way that complex analytical tools can be applied. The main emphasis is on process mining and data mining techniques and the combination of these methods for process-oriented data. After a general introduction to the business intelligence (BI) process and its
