The pulp is treated with beating or refining to separate the fibers from each other and to roughen the surface of the fiber. Most papers do not use adhesives but rely on hydrogen bonding between fibers. Paper is then formed by running a dilute slurry of pulp through a screen, and then most of the water is allowed to drain out by gravity.

Science And Technology [EBOOK]

The two-volume Handbook of natural
fibres is an indispensable tool in
understanding the diverse properties
and applications of these important
materials. Volume 1: Types,
properties and factors affecting
breeding and cultivation is an
essential guide to a wide range of
natural fibres, and highlights key
techniques for their improvement.
