Visualizing Human Biology Lab Manual provides 18 labs specifically designed for the non-majors biology student, each of which engages students by focusing on the structure and function of each person's own unique body. The lab manual includes key experiments with step-by-step visual guides and more interesting, real world topics to connect with students' diverse experiences. Visuals are used to teach and explain, not just illustrate, and students with varied learning styles will be engaged. The applications of common laboratory techniques in science, medicine, and everyday life are also explored in each lab topic.

The Laboratory Manual provides an emphasis on critical thinking and includes Safety Guidelines, Objectives, A List of Materials Needed, Topic Introduction, Activities with embedded questions, and Critical Thinking Questions.

Visualizing Human Biology is a visual exploration of the major concepts of biology using the human body as the context. Students are engaged in scientific exploration and critical thinking in this product specially designed for non-science majors. Topics covered include an overview of human anatomy and physiology, nutrition, immunity and disease, cancer biology, and genetics. The aim of Visualizing Human Biology is a greater understanding, appreciation and working knowledge of biology as well as an enhanced ability to make healthy choices and informed healthcare decisions.

One of the most important features of this laboratory manual is the infusion of thinking and problem solving skills with the content areas. Activities and questions within an exercise build on previously learned information and encourage students to transfer information from one section of the course to

another. All content and problem solving goals are accomplished by using a simple, non-threatening approach to the lessons. Even students with little science background are able to get involved and master the material. These exercises are cost effective and affordable. Typical schools will have most of the equipment needed to perform the experiments. Each exercise is designed for use in a three-hour laboratory period, but can be easily adapted to accommodate two-hour or ninety-minute sessions. To provide maximum flexibility for instructors, each exercise is broken down into several activities. Activities can be deleted or presented as demonstrations without diminishing the value of the remaining components. Many activities throughout the manual are suitable for use in online sections.

This laboratory manual is designed for an introductory majors biology course with a broad survey of basic laboratory techniques. The experiments and procedures are simple, safe, easy to perform, and especially appropriate for large classes. Few experiments require a second class-meeting to complete the procedure. Each exercise includes many photographs, traditional topics, and experiments that help students learn about life. Procedures within each exercise are numerous and discrete so that an exercise can be tailored to the needs of the students, the style of the instructor, and the facilities available.

Exploring Human Biology in the Laboratory is a comprehensive manual appropriate for human biology lab courses. This edition features a streamlined set of clearly written activities. These exercises emphasize the anatomy, physiology, ecology, and evolution of humans within their environment.

"Through his teaching, his textbook, and his online blog, Michael D. Johnson sparks interest by connecting basic biology to real-world issues relevant to your life. Through a storytelling approach and extensive online support, *Human Biology : Concepts and Current Issues*, Seventh edition not only demystifies how the human body works but drives you to become a better, more discerning consumer of health and science related information." --
