It's disappointing that there's no convenient menu that lets you just browse freebies. Instead, you have to search for your preferred genre, plus the word 'free' (free science fiction, or free history, for example). It works well enough once you know about it, but it's not immediately obvious.

Chronicle Jump in the saddle with a sure thing. Travel writer John Kendall travels to England to interview a racehorse trainer. Soon enough, however, Kendall realizes that completing the book will be tricky at best. Because the racehorse trainer he's tasked with interviewing has something to hide—a secret that could threaten Kendall's life.

Srinivas Aravamudan here reveals how Oriental tales, pseudo-ethnographies, sexual fantasies, and political satires took Europe by storm during the eighteenth century. Naming this body of fiction Enlightenment Orientalism, he poses a range of urgent questions that uncovers the interdependence of Oriental tales and domestic fiction, thereby challenging standard scholarly narratives about the rise of the novel. More than mere exoticism, Oriental tales fascinated ordinary readers as well as intellectuals, taking the fancy of philosophers such as Voltaire, Montesquieu, and Diderot in France, and writers such as Defoe, Swift, and Goldsmith in Britain. Aravamudan shows that Enlightenment Orientalism was a significant movement that criticized irrational European practices even while sympathetically bridging differences among civilizations. A sophisticated reinterpretation of the history of the novel, Enlightenment Orientalism is sure to be welcomed as a landmark work in eighteenth-century studies.

Dylan and Steve spend a weekend in a tree house which is reputed to be haunted, and Kelsey Moore, shaken by the prophecies of Madame Valda, who tells her that her fearless ways are foolish, finds her worst nightmares coming true.

Many countries in Latin America and the Caribbean have achieved considerable economic growth, yet the region still faces many seemingly intractable problems. The conventional wisdom in development agencies - that prioritization is impossible and that everything must be done - is simply not effective. Latin American Development Priorities shows how limited resources could be used for the greatest benefit of the Latin American and Caribbean region. A panel of economists met over three days in San José to review proposals to tackle the ten most important challenges, which emerged from a survey by the Inter-American Development Bank. The expert panel was asked a question which appears simple but is actually very difficult to answer: What should Latin American governments do with an additional nominal \$10 billion? Hard choices are needed if Latin America's problems are to be tackled effectively. This book provides the means to make those choices as objectively as possible.

Cornelia, eleven-years-old and lonely, learns about language and life from an elderly new neighbor who has many stories to share about the fabulous adventures she and her sisters had while traveling around the world. Reprint.

"Passion, peril and a princess in hiding" Forced into hiding after a threat to her life, Princess Gabriella St. Pierre must protect both herself and her unborn child. Working at an orphanage, the princess tries to suppress memories of a passionate night long ago with Whit Howell--her father's royal bodyguard and a man she never thought she'd see again. When an attempted abduction occurs as Princess Gabriella is leaving the orphanage, Whit rescues her and vows to keep her safe. But how can he shepherd the princess back to her country without knowing who is orchestrating these attacks...and why? It is the most important mission of his life--and he'd risk everything to save the one woman he can't live without.

This book is an updated effort in summarizing the trending topics and new hot research lines in solving dynamic problems using metaheuristics. An analysis of the present state in solving complex problems quickly draws a clear picture: problems that change in time, having noise and uncertainties in their definition are becoming very important. The tools to face these problems are still to be built, since existing techniques are either slow or inefficient in tracking the many global optima that those problems are presenting to the solver technique. Thus, this book is devoted to include several of the most important advances in solving dynamic problems. Metaheuristics are the more popular tools to this end, and then we can find in the book how to best use genetic algorithms, particle swarm, ant colonies, immune systems, variable neighborhood search, and many other bioinspired techniques. Also, neural network solutions are considered in this book. Both, theory and practice have been addressed in the chapters of the book. Mathematical background and methodological tools in solving this new class of problems and applications are included. From the applications point of view, not just academic benchmarks are dealt with, but also real world applications in logistics and bioinformatics are discussed here. The book then covers theory and practice, as well as discrete versus continuous dynamic optimization, in the aim of creating a fresh and comprehensive volume. This book is targeted to either beginners and experienced practitioners in dynamic optimization, since we took care of devising the chapters in a way that a wide audience could profit from its contents. We hope to offer a single source for up-to-date information in dynamic optimization, an inspiring and attractive new research domain that appeared in these last years and is here to stay.
