JCL statements tell z/OS where to find the appropriate input, how to process that input (that is, what program or programs to run), and what to do with the resulting output. All jobs use three main types of JCL statements: One JOB statement to identify the unit of work the operating system is to perform

With this utility, many different forms or logos could be stored as images, and printed when needed, all using the same standard blank paper, thus eliminating the need to stock many preprinted forms, and the need for operators to stop the printer and change paper.

## *JCL UTILITIES - IBM mainframe*

Reusable JCL collection Job control language (JCL) is a set of statements that you code to tell the z/OS ® operating system about the work you want it to perform. Although this set of statements is quite large, most jobs can be run using a very small subset.

## *JCL: Job Control Language for z/OS - Mainframes.com*

Discussion Job Control Language (JCL) is the command language of Multiple Virtual Storage (MVS), which is the commonly used Operating System in the IBM Mainframe computers. JCL identifies the program to be executed, the inputs that are required and location of the input/output and informs the Operating System through Job control Statements.
