Venous insufficiency. Two patients are discussed who sustained ischaemic complications after application of graduated compression stockings. Review of the literature demonstrates that low cutaneous pressures significantly decrease local blood flow and that the amount of pressure exerted by graduated compression stockings increases significantly with increases in leg girth.

Ischaemic complications of graduated compression stockings ...

Compression therapy can fight against venous hypertension that delays the healing process. This is especially applicable in patients with obesity, immobilization, or any pathology in the blood. This treatment aims to promote a venous return and to increase the ability of the body to heal the wound. Other effects of ischemic compression therapy are:
