One of these, the proof that all pure mathematics deals exclusively with concepts definable in terms of a very small number of fundamental logical concepts, and that all its propositions are deducible from a very small number of fundamental logical principles, is undertaken in Parts II–VII of this Volume, and will be established by strict symbolic reasoning in Volume II. The demonstration of ...

Deductive reasoning, also deductive logic, is the process of reasoning from one or more statements (premises) to reach a logical conclusion.. Deductive reasoning goes in the same direction as that of the conditionals, and links premises with conclusions.If all premises are true, the terms are clear, and the rules of deductive logic are followed, then the conclusion reached is necessarily true.

In a still narrower sense, logic is restricted to the study of inferences that depend only on certain logical concepts, those expressed by what are called the “logical constants” (logic in this sense is sometimes called elementary logic). The most important logical constants are quantifiers, propositional connectives, and identity.
