Never before have the wide range of disciplines comprising manufacturing engineering been covered in such detail in one volume. Leading experts from all over the world have contributed sections. The coverage represents the most up to date survey of the broad interests of the manufacturing engineer. Extensive reference lists are provided, making this an indispensable work for every engineer in industry. Never before have the wide range of disciplines comprising manufacturing engineering been covered in such detail in one volume. Leading experts from all over the world have contributed sections. Materials and processes are described, as well as management issues, ergonomics, maintenance and computers in industry. CAD (Computer Aided Design), CAE (Computer Aided Engineering), CIM (Computer Integrated Manufacturing) and Quality are explored at length. The coverage represents the most up-to-date survey of the broad interests of the manufacturing engineer. Extensive reference lists are provided, making this an indispensable work for every engineer in industry.

Provides the ideas, guidelines and techniques you need to capture the full potential of your CNC equipment. Nearly every aspect of CNC operations is addressed and the book is organized so you can use it as a step-by-step guide to efficient CNC utilization or as a shop floor reference for continuous improvement. Hundreds of specific utilization-boosting techniques are detailed.

"CNC programmers and service technicians will find this book a very useful training and reference tool to use in a production environment. Also, it will provide the basis for exploring in great depth the extremely wide and rich field of programming tools that macros truly are."--BOOK JACKET.

Technology in several forms, especially Information Technology (IT), has a strong tendency to converge at varying degrees. This phenomenon of converging innovation is likely to deepen and widen in the future due to intense competition in global markets. Asian manufacturing firms in particular lead the global industrial innovation. Convergent innovation exists as a constant disequilibrium between reference technology and matching technology; innovations of these technologies occur at different degrees to attain an optimal balance. Innovations as a result of convergence are often beneficial, improving welfare and employment. This book sheds light on the little-discussed idea of convergent innovation with examples hailing from Asia. The book also proposes new theories and investigates convergence at the micro level – guaranteed food for thought for academics interested in innovation economics and management.

In today ' s high-tech environment, we have to conceptualize a sophisticated translation skill that converts a vague set of wants into well-defined products. To do so, we must come to the concept of " demand articulation. " Marketing scholars have summarized that this concept is an important competency of market-driving firms. Most firms are more comfortable in a world of pre-articulated demand, wherein customers know exactly what they want, but the firm ' s challenge is to unearth that information. In order to better understand this idea, the book is organized into five categories, providing various insights into contextual change in innovation. These categories are: defense-centric; commercialization-centric; core competency-centric, innovation wave-centric, and fourth industrial revolution-centric. For each chapter, a specific industrial product is selected for analysis, and the longitudinal dynamics of demand articulation of emerging technologies are analysed.

The goal of this path-breaking volume is to relativize the experience of Japanese industries in terms of both location and time, exploring its similarities and differences with other countries and its unique relationship with the global standard of company performance set by US firms. Yongdo Kim looks beyond organizational principles, overturns stereotypes, and covers a wide range of industries. In particular, this book focuses on the intertwining of the market principle and the organizational principle in interfirm relationships among the steel, machine tool, integrated circuit and liquid-crystal display materials industries, concluding that there is no such thing as ' Japanese uniqueness ' in the history of interfirm relationships. This book compares several intermediate product industries within a global

context to offer insights into the studies of businesses across the globe. Numerous interviews with key individuals in the Japanese steel, integrated circuit and machine tool industries offer unique and illuminating information. This analysis covers a broad range of firms by examining the relationships within large companies as well as smaller corporations. This fresh and varied analysis is a critical resource for both business practitioners and scholars of business history, business strategy, industrial marketing, product development management, and economic history.
