Nanoscience involves studying the application of things that scale between 1 and 100 nanometers. In this field of study, scientists and engineers use nanotechnology engineering to manipulate individual atoms and molecules and create nanotechnology, which operates at a microscopic level. This process of nanotechnology engineering is used to produce materials with enhanced properties, like higher durability with less physical mass.

Nanoengineering is the practice of engineering on the nanoscale, wherein the unique and enabling aspects of a nanoscale material or structure are used to create a device to be utilized by mankind.

*UC San Diego NanoEngineering Department*

Nanoengineering is the practice of engineering on the nanoscale. It derives its name from the nanometre, a unit of measurement equalling one billionth of a meter. Nanoengineering is largely a synonym for nanotechnology, but emphasizes the engineering rather than the pure science aspects of the field.

### *Nanoengineering - Wikipedia*

Nanotechnology is the engineering of functional systems at the molecular scale. This covers both current work and concepts that are more advanced. In its original sense, nanotechnology refers to the projected ability to construct items from the bottom up, using techniques and tools being developed today to make complete, high performance products.
