This book is designed to meet the needs of both dental students and dentists by providing succinct and quickly retrievable answers to common dental questions. Students will find both that it clearly presents the particulars which should be familiar to every dentist and that it enables them to see the big picture and contextualize information introduced to them in the future. Practicing dentists, on the other hand, will employ the book as a daily reference to source information on important topics, materials, techniques, and conditions. The book is neither discipline nor specialty specific. The first part is wide ranging and covers the essentials of dental practice while the second part addresses individual specialties and the third is devoted to emergency dental treatment. Whether as a handy resource in the student's backpack or as a readily available tool on the office desk, this reference manual fills an important gap in the dental literature.

From Clans to Co-ops explores the social, political, and economic relations that enable the constitution of cooperatives operating on land confiscated from mafiosi in Sicily, a project that the state hails as arguably the greatest symbolic victory over the mafia in Italian history. Rakopoulos's ethnographic focus is on access to resources, divisions of labor, ideologies of community and food, and the material changes that cooperatives bring to people's lives in terms of kinship, work and land management. The book contributes to broader debates about cooperativism, how labor might be salvaged from market fundamentalism, and to emergent discourses about the 'human' economy.

This present book describes the different construction systems and structural materials and elements within the main buildings typologies, and it analyses the particularities of each of them, including, at the end, general aspects concerning laboratory and in-situ testing, numerical modeling, vulnerability assessment and construction maintenance.

Museum Object Lessons for the Digital Age explores the nature of digital objects in museums, asking us to question our assumptions about the material, social and political foundations of digital practices. Through four wide-ranging chapters, each focused on a single object – a box, pen, effigy and cloak – this short, accessible book explores the legacies of earlier museum

practices of collection, older forms of media (from dioramas to photography), and theories of how knowledge is produced in museums on a wide range of digital projects. Swooping from Ethnographic to Decorative Arts Collections, from the Google Art Project to bespoke digital experiments, Haidy Geismar explores the object lessons contained in digital form and asks what they can tell us about both the past and the future. Drawing on the author's extensive experience working with collections across the world, Geismar argues for an understanding of digital media as material, rather than immaterial, and advocates for a more nuanced, ethnographic and historicised view of museum digitisation projects than those usually adopted in the celebratory accounts of new media in museums. By locating the digital as part of a longer history of material engagements, transformations and processes of translation, this book broadens our understanding of the reality effects that digital technologies create, and of how digital media can be mobilised in different parts of the world to very different effects.
