(2) Cervical dilatation in normal labour can be slower than 1 cm per hour, and although this labour might last for a much longer time than previously taught it still ends in vaginal delivery and normal perinatal outcomes. (3) The cervix does not dilate in a linear fashion even in the active phase of labour; it is more likely to be hyperbolic.

Normal Labour Obstetrics N Gynaecology Made Easy

Gynaecology directly resulted as a new and separate field of study from obstetrics and focused on the curing of illness and indispositions of female sexual organs. This had some relevance to some conditions as menopause, uterine and cervical problems, and childbirth could leave the mother in need of extensive surgery to repair tissue.

Obstetrics - Wikipedia

Results The mean lengths of the first stage of labour in the primigravid women was 6.4 h after hypnosis and 9.3 h in the control group (P<0.0001); the mean lengths of the second stage were 37 min and 50 min, respectively (P<0.001). In the parous women the corresponding values were 5.3 h and 6.2 h (P<0.01); and 24 and 22 min (ns).

Normal Labour - Dewhurst's Textbook of Obstetrics ...

The World Health Organization (WHO) defines normal birth as follows: The birth is spontaneous in onset and low risk at the start of labor and remains so throughout labor and delivery. The infant is born spontaneously in the vertex position between 37 and 42 weeks of pregnancy. After birth, mother and infant are in good condition (1).

Management of Normal Labor - Gynecology and Obstetrics ...

What to Expect During Labor. During labor, your uterus (which is made up of muscles) will tighten and relax. This causes your cervix to open. Once the cervix is fully open (dilated), you will start to push the baby down through the birth canal. Every labor is different, but labor usually starts out slowly, with cramps.
