Oracle Server Tuning. Oracle became one of the world's leading databases because it is optimized to work on any database server from a mainframe to a Macintosh. However, Oracle does not run in a vacuum and the DBA must be careful to avoid server overload conditions. Fortunately, the Oracle10g Automated Workload Repository (AWR) tracks server performance over time and allows us to create detailed management reports that show exactly when

One of the most important challenges faced by Oracle database administrators and Oracle developers is the need to tune SQL statements so that they execute efficiently. Poorly tuned SQL statements are one of the leading causes of substandard database performance and poor response time. SQL statements

that perform poorly result in frustration for users, and can even prevent a company from serving its customers in a timely manner. In this book, Mark Gurry shares his in-depth knowledge of Oracle's SQL statement optimizers. Mark's knowledge is the result of many hard-fought tuning battles during his many years of providing Oracle tuning services to clients. Mark provides insights into the workings of the rule-based optimizer that go well beyond what the rules tell you. Mark also provides solutions to many common problems that occur with both the rule-based and cost-based optimizers. In addition to the specific problem/solution scenarios for the optimizers, Mark provides a number of handy SQL tuning tips. He
