This book will help nursing students with their learning and recall in a subject they often report to find difficult. Covering all the main topics relevant to nursing and including varied exercises, this book will prove be an effective aid alongside standard textbooks for any student studying anatomy and physiology. Dr Jim Jolly Lecturer School of Healthcare University of Leeds. This book is an excellent resource for students and their teachers as it complements all core anatomy and physiology text books and curricula no matter how the content is sequenced. The book covers all of the main systems in the body along with the fundamentals underpinning students' understanding of core concepts in physiology. The use of a self-assessment approach stimulates students to actively engage with the material while they self-correct and learn. The book is a gift to all nursing students revising for examinations that assess the anatomy and physiology component of their programme. I highly recommend this book. Dr. Margarita Corry, Registered Nurse Teacher and Academic, School of Nursing & Midwifery, Trinity College Dublin. Katherine Rogers is a Senior Lecturer in the School of Nursing and Midwifery at Queen's University Belfast, UK. Bill Scott is a Senior Lecturer and Researcher in Biomedicine at Letterkenny Institute of Technology, Ireland.

Provide the best care possible with expert insight and clinically relevant coverage of the physiologic changes that occur throughout all major periods of the perinatal experience – prenatal, intrapartum, postpartum, and neonatal. Maternal, Fetal & Neonatal Physiology: A Clinical Perspective, 4th Edition gives you a solid foundation for assessment and therapeutic interventions, featuring an emphasis on the evolving interrelationships between mother, fetus, and neonate and adaptations of preterm and term infants to the extrauterine environment. Solid coverage of the physiologic bases for assessment and therapeutic interventions make this an ideal resource for advanced practice. Synthesis of the latest research studies and evidence-based practice provides vital data on normal physiologic changes during the antepartum, intrapartum and postpartum periods; anatomic and functional development of the fetus; and developmental physiology of preterm and term neonates. Pharmacology tables offer quick access to key pharmacology information and drug effects with clinical examples. Coverage of pathophysiology and interventions for the pregnant woman, fetus, and newborn for selected abnormal events provides a solid understanding of physiologic adaptations and developmental physiology relating to major body systems and metabolic processes. Comprehensive tables, diagrams, and illustrations highlight important concepts and summarize key information Thoroughly updated content offers the very latest evidence-based information, contemporary research, and clinical developments related to maternal, fetal, and neonatal physiology. New coverage on the late pre-term infant provides the most current practice guidelines to promote quality care. Expanded discussions of reproductive processes reflect cutting-edge research and the clinical implications of physiologic and genetic effects brought to bear from both the female and the male. Extensive and reliable web sources allow for further study or checking for updated information. New NICHD standard definitions on fetal monitoring enable you to identify fetal heart rate patterns using standardized nomenclature.

"Learning to Care explains and promotes the importance of psychological care for people when they become physically ill, giving a sound theoretical basis to ensure care is evidence-based. It encourages the reader to think about the effects of illness and disability on patients, and understand what can be done to identify and minimise any difficulties they might be experiencing in these areas. The chapters cover: the meaning and elements of care and holistic care a model of psychological care in practice the personal qualities and skills of carers that best underpin psychological care delivery, and how these might be enhanced. The knowledge needed for effective psychological caregiving, psychological care as it might be practised in a range of health care settings. This text contains key learning points, practical activities, reflective exercises and case illustrations. It is ideal for student and practising nurses, and health professionals who would like to improve their care for patients in this essential area."--Provided by publisher.

A trusted person-centred resource to start you on the path to professional success Fundamentals of Nursing and Midwifery is a popular foundational nursing text specifically developed for Australian and New Zealand students. This comprehensive resource provides a detailed overview of key information with person-centred care highlighted throughout to focus on the individualistic, interactive and holistic nature of nursing and midwifery practice. It uses accessible language that introduces students to the 'why' as well as the 'how' of nursing and midwifery. It focuses not only on a person's physical healthcare needs, but also on the intellectual, emotional, sociocultural and spiritual aspects of care. In this way, students learn to be holistic health care professionals while acquiring the foundational knowledge, procedures and skills required for successful nursing or midwifery practice.
