What is the link between scholarship and democracy? What role do academics play in sustaining democratic values? Why should concerns about the ðhollowing-outð of democracy include a focus on the changing governance of higher education? Offering the first comparative analysis of how both democratic and autocratic politicians are seeking to control the research funding landscape, this book reveals a very worrying shift in the relationships between the state and universities: With higher education politically redefined as a mere tool of economic strategy, the space for academic autonomy, intellectual independence and critical thinking is being closed down. This book will be of interest to anyone concerned about democratic governance and the future of higher education.

This volume is the definite statement on the current state of political science as a discipline in Western Europe. Detailfour chapters portray European developments. To know about the historical development, the organization of teaching and research, professional communication, and the chances of students of political science in the job market is of essential importance to political scientists, university administrators, and policy makers national, European, and global. This is particularly true after the Bologna Declaration when universities across Europe were asked to adopt (1) a system of easily readable and comparable degrees, (2) a system based on two cycles, (3) the establishment of a common system of credits, (4) to increase student and teacher mobility, (5) to assure quality standards, and (6) to improve the European dimension in teaching. The book informs on these general issues and reports country specific developments.

Drawing on the rich resources of the ten-volume series of The Oxford Handbooks of Political Science, this one-volume distillation provides a comprehensive overview of all the main branches of contemporary political science: political theory; political institutions; political behavior; comparative politics; international relations; political economy; law and politics; public policy; contextual political analysis; and political methodology. Sixty-seven of the top political scientists worldwide survey recent developments in those fields and provide penetrating introductions to exciting new fields of study. Following in the footsteps of the New Handbook of Political Science edited by Robert Goodin and Hans-Dieter Klingemann a decade before, this Oxford Handbook will become an indispensable guide to the scope and methods of political science as a whole. It will serve as the reference book of record for political scientists and for those following their work for years to come.

This pioneering volume is devoted to the analysis of education from the perspective of political science, applying the full range of the discipline's analytical perspectives and methodological tools. The contributions demonstrate how education policy can be explored systematically from a variety of political science perspectives: comparative politics, public policy analysis and public administration, international relations, and political theory. By applying a governance perspective on education policy, the authors explore the changing institutional settings, new actors' constellations, horizontal modes of interaction and public-private regulatory mechanisms with respect to the role of the state in this policy field. The volume deals with questions that are not merely concerned with the content or outcomes of education, but it explicitly takes a political science view on how education politics work. Including country case studies from the Americas and across Europe, institutional analyses of education policy in the EU and the WTO/GATS as well as normative reflections on the topic, the volume provides a grand overview on the diversity of issues in education policy. Dealing with a so far neglected field of policy, this book provides a comprehensive and accessible analysis of a rapidly changing topic. Education in Political Science will be of interest to scholars and students of political science, education, sociology and economics.
