This work provides a guide to how economics can be used to manage scarcity of resources in health services. It outlines the principles of economics in a non-technical manner, before going on to address the issues of how to apply the principles in day to day health services management.

Volume 4 considers the configuration of the broader healthcare eco-system. It examines the tight connection between sustainable healthcare, sustainable communities, and sustainable ecologies - and the organizational and inter-organizational approaches being applied to advance overall sustainability.

This toolkit provides practical guidance and support to develop and implement national biosecurity frameworks at the country level. It presents the benefits of a harmonized and integrated approach to biosecurity and illustrates the experiences of countries, including Belize, Norway and New Zealand, which have adopted such an approach in recent times. By providing a framework to identify cross-cutting biosecurity capacity needs based on an integrated approach, this toolkit addresses the gaps inherent in a purely sectoral approach to biosecurity. The purpose is to support governments to better manage biosecurity as a means to protect public health, agricultural production and the environment. At the same time, this will enhance the ability of countries to comply with international agreements, regulations and requirements focused on sanitary and phytosanitary measures, contributing to economic development and trade.

Portfolio Decision Analysis: Improved Methods for Resource Allocation provides an extensive, up-to-date coverage of decision analytic methods which help firms and public organizations allocate resources to 'lumpy' investment opportunities while explicitly recognizing relevant financial and non-financial evaluation criteria and the presence of alternative investment opportunities. In particular, it discusses the evolution of these methods, presents new methodological advances and illustrates their use across several application domains. The book offers a many-faceted treatment of portfolio decision analysis (PDA). Among other things, it (i) synthesizes the state-of-play in PDA, (ii) describes novel methodologies, (iii) fosters the deployment of these methodologies, and (iv) contributes to the strengthening of research on PDA. Portfolio problems are widely regarded as the single most important application context of decision analysis, and, with its extensive and unique coverage of these problems, this book is a much-needed addition to the literature. The book also presents innovative treatments of new methodological approaches and their uses in applications. The intended audience consists of practitioners and researchers who wish to gain a good understanding of portfolio decision analysis and insights into how PDA methods can be leveraged in different application contexts. The book can also be employed in courses at the post-graduate level.

This book provides the reader with a theoretical and practical understanding of two health care delivery models: the patient/child centred care and family-centred care. Both are fundamental to caring for children in healthcare organizations. The authors address their application in a variety of paediatric healthcare contexts, as well as an understanding of legal and ethical issues they raise. Each model is increasingly pursued as a vehicle for guiding the delivery of health care in the best interests of children. Such models of health care delivery shape health care policies, programs, facility design, resource allocation decisions and day-to-day interactions among patients, families, physicians and other health care professionals. To maximize the health and ethical benefits these models offer, there must be shared understanding of what the models entail, as well as the ethical and legal synergies and tensions they can create. This book is a valuable resource for paediatricians, nurses, trainees, graduate students, practitioners of ethics and health policy.

Representing the first collection on the topic, this book builds from foundations to case studies, to future prospects, providing the reader with a rich and comprehensive understanding of the use of multi-criteria decision analysis (MCDA) in healthcare. The first section of the collection presents the foundations of MCDA as it is applied to healthcare decisions, providing guidance on the ethical and theoretical underpinnings of MCDA and how to select MCDA methods appropriate to different decision settings. Section two comprises a collection of case studies spanning the decision continuum, including portfolio development, benefit–risk assessment, health technology assessment, priority setting, resource optimisation, clinical practice and shared decision making. Section three explores future directions in the application of MCDA to healthcare and identifies opportunities for further research to support these.

Health care and medicine are dependent upon a close interaction with social sciences and professions in order to effectively treat patients. Although medicines have becoming more and more targeted in recent times, it is the recovery of the patient which is the true test of the system whether it be in a hospital setting or within a daily societal setting. Such interactions may be psychological or interactions with social organisations essential to phase the patient back into society. This book presents new issues, experiences and research in the field from around the globe.

Based on successful commissioning-related MSc programmes and short courses, this title provides an introduction to commissioning for health and social care managers and policy makers.

Whenever the legitimacy of a new or ethically contentious medical intervention is considered, a range of influences will determine whether the treatment becomes accepted as lawful medical treatment. The development and introduction of abortion, organ donation, gender reassignment, and non-therapeutic cosmetic surgery have, for example, all raised ethical, legal, and clinical issues. This book examines the various factors that legitimatise a medical procedure. Bringing together a range of internationally and nationally recognised academics from law, philosophy, medicine, health, economics, and sociology, the book explores the notion of a treatment, practice, or procedure being proper medical treatment, and considers the range of diverse factors which might influence the acceptance of a particular procedure as appropriate in the medical context. Contributors address such issues as clinical judgement and professional autonomy, the role of public interest, and the influence of resource allocation in decision-making. In doing so, the book explores how the law, the medical profession, and the public interact in determining whether a new or ethically contentious procedure should be regarded as legitimate. This book will be of interest and use to researchers and students of bioethics, medical law, criminal law, and the sociology of medicine. Chapter 6 of this book 'Family perspectives on proper medical treatment for people in prolonged vegetative and minimally conscious states' by Celia Kitzinger and Jenny Kitzinger is available under an open access CC BY NC ND license and can be viewed at: <http://preview.ncbi.nlm.nih.gov/books/prevqa/NBK199156/> .

The gap between a rising demand for health care services on the one side and scarce resources on the other, is leading to a growing pressure on decision-making processes. Hence, prioritization in medicine has become an increasingly important issue for assuring stability of health systems and improving the capability of health care. The present volume addresses normative dimensions of methodological and theoretical approaches, the legal basis behind priority setting as well as international experiences concerning the normative framework and the process of priority setting. It also examines specific criteria for prioritization and discusses economic evaluations. Contributing authors from a broad range of scientific disciplines discuss prioritization within an international dialogue.
