1. ENGINE TESTING 1.1 FUEL POWER (F.P.) Fuel power is the thermal power released by burning fuel inside the engine. $F.P. = \text{mass of fuel burned per second} \times \text{calorific value of the fuel}$. $F.P. = mf \times C.V.$ All engines burn fuel to produce heat that is then partially converted into mechanical power. The chemistry of combustion is not dealt with here.
