Hello everyone. Today I will explain about socket.io in Node JS. Socket.io is used for real time communication between applications. In chat application and some other applications you can use socket.io. Communication between applications using socket.io is very speedy. Socket.io is also used in IOT (Internet of things) for real time object status.

Socket.io Programming With Example In Node.js
Socket.io is a library that allows real-time, event-based communication in Node.js and browser-based applications. It uses the implementation of WebSockets protocol and offers some advantages over the protocol itself. If you're not familiar with WebSockets, WebSockets allows you to communicate between a client and a server in a nonstandard way.

Build a Chat App with Node.js and Socket.io
Example. Using Node.JS Cluster. Just like NginX, Node.JS comes with built-in clustering support through the cluster module.. Fedor Indutny has created a module called sticky session that ensures file descriptors (ie: connections) are routed based on the originating remoteAddress (ie: IP). Please note that this might lead to unbalanced routing, depending on the hashing method.

Using multiple nodes | Socket.IO
Note: the app.use ('/static') line, will expose the node_modules folder in the server, this in order to access the socket.io.js file in index.html. You can delete this line and copy the socket.io.js from the socket.io folder and copy it directly in the same directory where index.html is located, in case you don't want to expose this folder.

How to use Socket.IO properly with Express Framework in ...
socket.io. Features. Socket.IO enables real-time bidirectional event-based communication. It consists of: a Node.js server (this repository) a Javascript client library for the browser (or a Node.js client) Some implementations in other languages are also available: Java; C++; Swift; Dart; Its main features are: Reliability

socket.io - npm
https:// your-node-app.com Tweets about socket.io and javascript Socket.IO enables real-time, bidirectional and event-based communication. It works on every platform, browser or device, focusing equally on reliability and speed.
