Prerequisite: Water Restoration Technician (WRT) The Applied Microbial Remediation Technician course covers mold and sewage remediation techniques to individuals engaged in property management, property restoration, IEQ investigations or other related professions.

Alone in the big city, girl on the rise, Vivian Anderson was making it by herself. She didn't need a man or a relationship. She had her family and friends convinced that flying solo was her only option because of her demanding career. Of course, she had dates but not one person appealed to her. All of her previous romances left her dead in the water. Was it possible that she had overlooked the man of her dreams? Once Vivian stopped searching, her knight in shining armor fell into her lap (she almost tossed him aside from sheer annoyance). Now what to do? If only life was simple and uncomplicated. Vivian didn't want to make the same mistakes that her parents made, yet they were the only examples she had. Vivian needed counseling and a role model. Would she be able to salvage her relationship with Robert Taylor or would she run from true love as she had done so many times before? Vivian finds love but she decides to go against the grain. She wants love her way because that is the only way she will agree to it. Will she be successful or fail once again?

People's desire to understand the environments in which they live is a natural one. People spend most of their time in spaces and structures designed, built, and managed by humans, and it is estimated that people in developed countries now spend 90 percent of their lives indoors. As people move from homes to workplaces, traveling in cars and on transit systems, microorganisms are continually with and around them. The human-associated microbes that are shed, along with the human behaviors that affect their transport and removal, make significant contributions to the diversity of the indoor microbiome. The characteristics of "healthy" indoor environments cannot yet be defined, nor do microbial, clinical, and building researchers yet understand how to modify features of indoor environments â € such as building ventilation systems and the chemistry of building materials â € in ways that would have predictable impacts on microbial communities to promote health and prevent disease. The factors that affect the environments within buildings, the ways in which building characteristics influence the composition and function of indoor microbial communities, and the ways in which these microbial communities relate to human health and well-being are extraordinarily complex and can be explored only as a dynamic, interconnected ecosystem by engaging the fields of microbial biology and ecology, chemistry, building science, and human physiology. This report reviews what is known about the intersection of these disciplines, and how new tools may facilitate advances in understanding the ecosystem of built environments, indoor microbiomes, and effects on human health and well-being. It offers a research agenda to generate the information needed so that stakeholders with an interest in understanding the impacts of built environments will be able to make more informed decisions.

This comprehensive handbook is recognized as the definitive stand-alone energy manager ' s desk reference, used by tens of thousands of professionals throughout the energy management industry. This new ninth edition includes new chapters on energy management controls systems, compressed air systems, renewable energy, and carbon reduction. There are major updates to chapters on energy auditing, lighting systems, boilers and fired systems, steam and condensate systems, green buildings waste heat recovery, indoor air quality, utility rates, natural gas purchasing, commissioning, financing and performance contracting and much more with numerous new and updated illustrations, charts, calculation procedures and other helpful working aids.

Insurance restoration the repair of buildings damaged by water, fire, smoke, storms, and other disasters is an exciting and challenging field of construction. It also offers contractors lucrative work that's immune to economic downturns pipes still break, buildings still burn, and trees are still blown over, regardless of the economy. And with the insurance companies funding the repairs, your payment is virtually guaranteed. But not just anyone can repair fire- and water-damaged buildings. You need the knowledge and the equipment to get the job done right, and that's what this book is all about. From understanding fire repairs and smoke odors to restorative drying methods, mold remediation, and handling contents, you'll not only learn how to provide top-notch property and content restoration services, but also how to become the person homeowners and insurance companies turn to first in an emergency putting yourself first in line for all the best jobs.

A new ' Multi-Coloured Manual' This book is a successor to and replacement for the highly respected manual and handbook on the benefits of flood and coastal risk management, produced by the Flood Hazard Research Centre at Middlesex University, UK, with support from Defra and the Environment Agency. It builds upon a previous book known as the "multi-coloured manual" (2005), which itself was a synthesis of the blue (1977), red (1987) and yellow manuals (1992). As such it expands and updates this work, to provide a manual of assessment techniques of flood risk management benefits, indirect benefits, and coastal erosion risk management benefits. It has three key aims. First it provides methods and data which can be used for the practical assessment of schemes and policies. Secondly it describes new research to update the data and improve techniques. Thirdly it explains the limitations and complications of Benefit-Cost Analysis, to guide decision-making on investment in river and coastal risk management schemes.

Considering that the biggest machines that do the most work are made up of smaller machines and components, it becomes obvious that when a large machine breaks, it is normally due to small components acting antagonistically. Detailing a time-tested method for increasing productivity and lowering operational costs, Spend Analysis and Specification Development Using Failure Interpretation explains how to establish performance-based procurement specifications for the components, devices, and items that contribute the most to operational downtime and repair/replacement costs. The book emphasizes the critical need to perform both spend and failure analysis in order to develop a procurement document, which will ultimately reduce overall costs. Accompanied by a CD with helpful material such as, specification checklists, case study worksheets, form letters, and return on investment (ROI) worksheets that you can customize to your needs, the text discusses how to: Identify the products that will cost the most if they fail Develop performance-based procurement specifications to reduce direct and indirect costs Examine cost analysis as it relates to operations, maintenance, and production Determine effective criteria based on properties, test results, and standards for each operation Written by an industry expert with decades of experience giving seminars, training customers and associates, and authoring numerous papers and articles, the text provides the real-world understanding of the influential components and materials ' physical properties needed to engage in effective failure and spend analysis. It addresses product submission and monitoring and includes helpful tools so you can immediately get started on conducting your own cost-saving analysis.

Clinical supervision (CS) is emerging as the crucible in which counselors acquire knowledge and skills for the substance abuse (SA) treatment profession, providing a bridge between the classroom and the clinic. Supervision is necessary in the SA treatment field to improve client care, develop the professionalism of clinical personnel, and maintain ethical standards.
