And so, our system needs to protect the legal votes from the illegal votes so that those votes count real and like they should. BLITZER: We have to leave it there. "Was the 2004 Election Stolen?" That ...

The fiftieth anniversary of the Bretton Woods Conference served as an opportunity to reappraise the desirability of strengthening the IMF's oversight of the functioning of the international monetary system. Whatever the design of an exchange rate system and the arrangements for the provision of international liquidity, it is widely accepted that to be effective such oversight must rest on a strong analytic foundation. These two volumes, edited by Jacob A. Frenkel and Morris Goldstein, present 30 analytic papers on the system as it functioned during 1987-91 and aim at conveying the flavor of those issues that commanded close attention in the Fund's research program.

After a century and a half of efforts at constructing arrangements and rules for international monetary interaction, present-day national authorities do not seem to have come much closer to achieving the aim of enduring exchange rate stability combined with a good macroeconomic performance. A distinguished group of economists and economic historians offers new insights into the working of the most important of such experiences, including nineteenth century bimetallism, the 'classical' gold standard, Bretton Woods and the European Monetary System.

Since the publication of Keynes's General Theory of Employment, Interest and Money in 1936, macroeconomic theory has altered considerably. Each author in this volume focuses on an issue which either preceded, accompanied or followed the 'Keynesian Revolution' and helped to shape economics in subsequent years. Contributors reconsider some of the major concepts of the "General Theory": unemployment and the identity of income and output. They also highlight some of the controversies in macroeconomic theory and review the macroeconomic policy implications and consequences.

Sir John Hicks (1904-1989) was a leading economic theorist of the twentieth century, and along with Kenneth Arrow was awarded the Nobel Prize in 1972. His work addressed central topics in economic theory, such as value, money, capital and growth. An important unifying theme was the attention for economic rationality 'in time' and his acknowledgement that apparent rigidities and frictions might exert a

positive role as a buffer against excessive fluctuations in output, prices and employment. This emphasis on the virtue of imperfection significantly distances Hicksian economics from both the Keynesian and Monetarist approaches. Containing contributions from distinguished theorists in their own right (including three Nobel Prize winners), this volume examines Hicks's intellectual heritage and discusses how his ideas suggest a distinct approach to economic theory and policy making. It will be of great interest to scholars and students of economic theory and the history of economic thought.

This book gathers the best papers presented at the conference "The Future of the Global Financial System: Downfall or Harmony", which took place in Limassol, Cyprus on April 13-14, 2018. Organized by the Institute of Scientific Communications (Volgograd, Russia), the conference chiefly focused on reassessing the role and meaning of the global financial system in the modern global economy in light of the crisis that began in 2008 and can still be observed in many countries, and on developing conceptual and applied recommendations on spurring the development of the global financial system. All works underwent peer-review and conform to strict criteria, including a high level of originality (more than 90%), elements of scientific novelty, contribution to the development of economic science, and broad possibilities for practical application. The target audience of this scientific work includes postgraduates, lecturers at higher educational establishments, and researchers studying the modern global financial system. Based on the authors' conclusions and results, readers will be equipped to pursue their own scientific research. The topics addressed include (but are not limited to) the following issues, which are interesting for modern economic science and practice: financial globalization, the role of finances in the global economy, perspectives of transition in the financial system from part of the infrastructure to a new vector of development in the global economy in the 21st century, reasons for the crisis of the modern financial system and ways of overcoming it, problems and perspectives regarding the harmonization of the global financial system, and scenarios of development for the global financial system. The content is divided into the following parts: development of financial systems at the micro-, meso- and macro-levels, financial infrastructure of the modern economy, legal issues of development of the modern financial system, and management of the global financial system.
